AB This wastewater treatment method for treating wastewater by activated sludge while solid-liq. sepg. wastewater by a membrane sepn. app. in an aeration tank includes a process of adding a washing particle to wastewater at the time of starting operation of an aeration app. The washing particle is fluidized by aeration air flow and consequently generated wastewater flow for washing the membrane surface of the membrane sepn. app. Without requiring seed sludge addn., clogging of the sepn. membrane of the membrane sepn. app. is suppressed and the filtration rate is kept high.
